Advice

ARE YOUR TAPS DRIPPING?

A dripping tap can waste up to 12,000 litres a year.

That's a lot of water, so if your tap is dripping in your kitchen or bathroom at work or at home - let someone know or get it fixed!

A tap leaks when it can't be properly turned off, or if the tap washer needs replacing.

Watch the 'How to' guides on the Smart WaterMark YouTube Channel to see how you can replace your tap washer and start saving water and money straightaway.
